## SUMMARY

Final-year Computer Science undergraduate with a broad software engineering background spanning machine learning, mobile and back-end development, algorithms, and secure systems. Comfortable in Python, Java, and C++, and experienced in taking projects from design through to tested, working software. Seeking a graduate software engineering, development, or technology role where I can contribute across the stack and keep learning quickly.

## TECHNICAL SKILLS

**Languages:** Python, Java, C++, SQL, JavaScript, HTML/CSS

**Frameworks & Tools:** PyTorch, scikit-learn, NumPy, Firebase, Android SDK, Git, pytest

**Concepts:** Object-Oriented Design, Data Structures & Algorithms, Database Systems, Machine Learning, Distributed Systems, Software Testing, Secure Development (access control, data validation)

## EDUCATION

**University of Wollongong in Dubai**

*B.Sc. in Computer Science*

Dubai, UAE

*Expected 2026*

**Relevant Coursework:** Algorithms & Data Structures, Object-Oriented Programming (Java), Advanced Programming (C++), Database Systems, Modern Artificial Intelligence, Networks & Communications, Ethical Hacking & System Security

**The Winchester School, Jebel Ali**

*A Levels – ICT, Physics, Mathematics*

Dubai, UAE

*2022*

## PROJECTS

**C.L.I.P – AI Live-Class Engagement Platform (Capstone, in progress)**

*AI Agents, RAG, MS Teams*

- Co-designing a multi-agent platform integrated with Microsoft Teams that generates concept-check questions from lecture material (RAG), tracks attention through on-device gaze detection, and surfaces real-time engagement analytics to lecturers.

**Federated AML Engine**

*Python, PyTorch*

- Implemented Federated Averaging (FedAvg) across three simulated banks so that only model weights, never raw transaction data, leave each client; built the MLP architecture, local training loop, weighted aggregator, and per-round evaluation, with a unit-tested pipeline and validation-set threshold selection to handle a 2% fraud base rate.

**HarmonicDNA**

*Python, librosa, NumPy*

- Applied the Smith-Waterman local alignment algorithm to chord progressions extracted from audio, building beat-synchronous chromagram analysis, a 24-chord template matcher, a custom music-theory scoring matrix, and a dynamic-programming aligner exposed through a CLI.

**PlantUp – Android Mobile App**

*Android (Java), Firebase*

- Built a full Android application end-to-end: Firebase Authentication, Realtime Database with secure CRUD operations, input validation, error handling, and a multi-screen interface; generated and deployed the signed APK.

## WORK EXPERIENCE

**BPG Group**

*Survey Tester (QA)*

Dubai, UAE

*Mar 2025*

- Tested and validated digital platforms across devices for usability, security, and data accuracy; documented and reported defects to the IT team.

**Tawakul & Zandieh Trading Co. L.L.C.**

*IT Intern*

Dubai, UAE

*Jun 2023*

- Configured secure office networks and core hardware, and assisted in deploying Point-of-Sale (POS) systems.
- Managed corporate accounts, credentials, and access permissions, and documented configurations to reduce downtime.

## ADDITIONAL EXPERIENCE

**Buzzle Events**

*Event Coordinator (Intern) · Event & Ticket Marshal (F1 Abu Dhabi GP)*

Dubai, UAE

*Oct 2022 – Jan 2026*

- Coordinated end-to-end logistics and led marshal teams across large-scale live events, organising access control and safety compliance in high-profile environments.

**Threads**

*Sales Intern*

Dubai, UAE

*Jul – Aug 2022*

- Handled Point-of-Sale transactions, conducted market research, and supported promotional displays.
